STARMAKER BY @FLUOTEC THE PERFECT LIGHTING TOOL FOR TODAY'S DIGITAL CINEMA PRODUCTIONS AFFORDABLE RENTAL RUGGED HIGH QUALITY LIGHTING

FLUOTEC presents its new StarMaker® IP65 luminaire, the perfect lighting tool for today's film and digital video productions

<http://fluotec.net/pdf/STARMAKER.pdf>

Used by LightWarriors and ENG, EFP video producers and filmmakers, the StarMaker® by FLUOTEC is a robust and powerful system of tunable LED lighting for film and digital video production available in two levels of protection against the elements.

The new IP-65 is designed to be waterproof and dustproof, for outdoor use where weather elements can be unpredictable. The IP-20 is designed for indoor and dry environments.

Both lights are bicolor flat LED panels with the separate ability to control color mix between daylight & tungsten, as well as brightness levels. They have 93+ CRI, and TLCI color rating for photo quality lighting. They can be used at full daylight color (6200K), full tungsten (2800K) or any color mix level in between.

StarMaker LEDs are air convection cooled, through heat sink fins installed on the rear of the units. This removes the need for cooling fans, which can often be intrusive into audio microphones on a shoot. The light is completely silent.

They are powered either by auto-setting 90-240V AC, or 14 Volt V-mount battery plate on the unit. Battery life will vary, depending on its size, age and level of charge. On / off power is controlled by a switch on the rear of the unit. If using AC, there is also one

installed in the power cable. This can be an advantage if the light is positioned high up on a stand, and therefore hard to access.

STARMAKER systems are available in the US

The Starmaker is a tunable pure neutral white light, an All-Terrain-Weather: water & dust proof lighting fixture with an amazing certified IP65 ingress protection rating. It can be used in full sand or dust storms, as well as full rain storms from all angles.

The StarMaker® IP65 is a ProductionLED PANEL with a tunable pure neutral white light CCT Range: 2800K-6500K, able to run of both AC and DC battery power with a high certified >94 CRI and TLCI indexes for accurate rendering of colors, it is a portable low weight (10.6lb) very rugged all metal construction system, not a plastic fragile fixture.

This makes it perfect for news crews working in all types of weather, including those challenging live TV shots taken during raging storms. Its body is sealed and fully protected against the elements, and ideal lighting tool for today's extreme Production Lighting, a very affordable system also for rental companies because it includes AB Gold or V Lock Mounts for battery operation that eliminates the need for extensive cabling in rushed situations used in: Broadcast, Motion Pictures, Schools, Universities, Digital Cinema, Video and Photography.

It's tunable ability allows custom lighting to match a location ambience, which can often be, a color temperature mixture of tungsten, fluorescent and window light.

You can also vary the light's color temperature CCT from that of the ambient location, to contrast the subject more against the background, helping create a visual sense of tri-dimensional depth, or even resolve cosmetic issues such as warming up a pale skin tone.

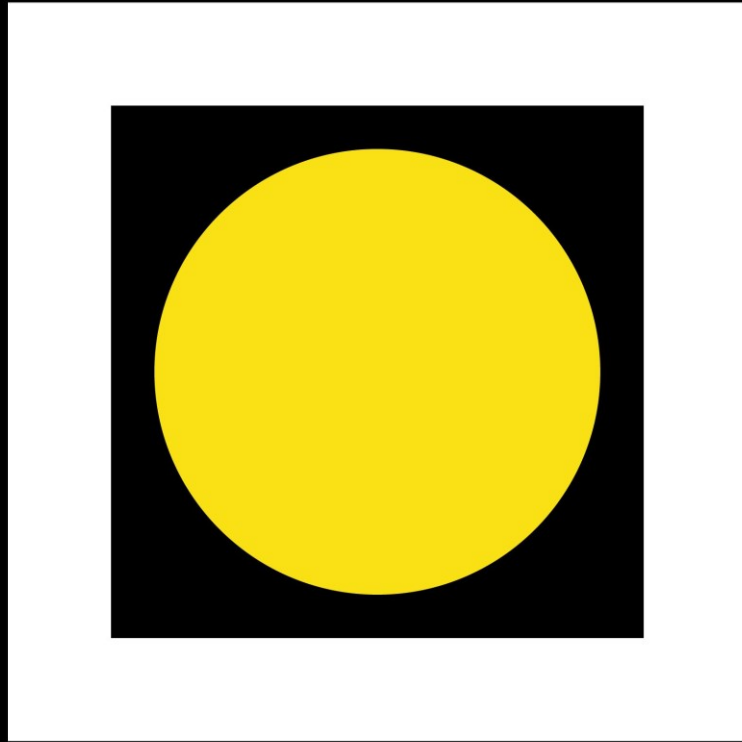

Its impressive beam quality delivers smooth even output, that bathes your subject in a beautiful soft neutral pure white light, without the multi-shadow artifacts of lesser LED fixtures.

Whether you are lighting a dramatic feature film or doing a live location news feed, your talent will look great. It is also the perfect choice for constant source lighting in still photo shoots, either in studio or on location.

The Starmaker(TM) designed & manufactured by FLUOTEC now delivers an impressive 111 fc output @6ft. Twice the light output at more than half the price of competitive fixtures, it has a very efficient passive cooling fan-less no-noise operation, a totally integrated and weatherized fixture that does not need any external attachments or expensive optional accessories, it is a ready to use lighting solution right from the box.

- Tunable Pure Neutral White Light CCT Color Temperature Range: 2800K-6500K with a High Quality CRI & TLCI index: >94
- IP65 Certified Ingress Protection Rating ensures performance outdoors and on location with protection against dust or water entering the fixture.
- Included either Anton Bauer Gold or V-Lock mount for battery operation
- Beam Angle: 45°
- 5800-6000 lumens in LED power while only drawing 80W of power
- 0-100% Stepless HALODIM (TM) technology for no CCT color shift while dimming
- Fan less Operation totally silent operation
- Powercon Bridging
- Universal 90-240V-50/60Hz .67A (80W) @120V Internal Power Supply and AB Gold or V-Mount for Battery Operation
- Filter Gel Frame Holder & 5/8" Stand Fitting Included
- Flight Portable Dimensions 16.00 x 12.25 x 4.75" (40.6 x 31.0 x 12.0 cm)
- With Stand Fitting: 16.00 x 16.25 x 4.75" (40.6 x 41.3 x 12.0 cm)
- Low Weight 10.5 lb. (4.8 kg)
- Package Weight 15.05 lb.
- Box Dimensions (LxWxH) 19.4 x 18.9 x 6.8"
